

FIRST WEEDWACKER AERO SQUADRON

Lithium Battery Charging Policy

The following is the lithium polymer battery charging protocol to be followed when charging lithium polymer batteries at Cactus Park

- Any individual wishing to charge a lithium polymer battery at Cactus Park must be a WeedWacker Club member and be a Certified Electric Airplane Pilot, or be a guest of a Certified Electric Airplane Pilot and under their supervision.
- All lithium polymer based batteries must be charged at the designated table in a fireproof container provided by the member or guest. A commercially available container is preferred, although one of the club's electric airplane safety technicians or EAST, can choose to certify a container upon request.
- Each person must provide their own charger designed for charging lithium polymer based batteries.
- Each person must provide their own power source. Connections shall be secure and all connections properly insulated. There is no direct charging to be done from a battery installed in a vehicle.
- Each person who is charging a lithium polymer based battery shall periodically monitor their battery while it is charging.
- If a member sees a fire in the park, the member shall call the Lakeside Fire Department immediately.
- There shall be at least one operating cell phone on site at all times when a model airplane is being flown.
